Final step (Due: Apr. 30th, Saturday, 11:59pm)

This step will count for (60 + 10)%. There are no new features required for this step. The purpose for the step is for you to carry out an overhaul of your compiler and make sure it has all the functionality previously required. The below test cases are new. You should also test your compiler with all the previously posted test cases. Also there will be a few more hidden test cases for this step and they will account for 10% of the grade.

Testcases

For this step, published testcases will only contain the micro source code. Apart from these test cases, be aware that there are also a few more hidden test cases to deal with.

- Read/Write micro source
- Expression micro source
- If statement micro source
- For statement micro source
- Function call micro source

The Tiny simulator in step7 should be used.

Submission

Project name is "final".
